

6. Project Documentation Phase

Project Module: Visitor Management System

Phase Description: -

Comprehensive user documentation, technical implementation references, administrator guides, workflow documentation, and operational procedures for the Visitor Management System.

This document serves as the formal milestone artifact for the ServiceNow development workflow lifecycle.

End-User Interface & Form Layout: -

Visitor Registration Interface:

Built a clean and user-friendly visitor registration interface inside the Visitor Management System application.

Form Components:

Integrated the following input fields:

- Visitor Name
- Employee Name (Reference Field)
- Phone Number
- Email
- Company Name
- Visit Date
- Purpose of Visit
- Status
- Checked In Time

User Experience Design:

The form was organized using a logical field sequence to improve usability and simplify visitor registration.

Benefits:

- Easy data entry
- Improved navigation
- Better user experience
- Reduced registration errors

Backend Process Mapping: -

Automated Flow Processing:

Implemented a Flow Designer workflow that automatically executes when a visitor record is created.

Workflow Activities:

- Record Creation Trigger
- Status Update
- Email Notification
- Visitor Tracking

Status Lifecycle:

Requested

↓

Approved

↓

Checked In

↓

Completed

Automation Benefits:

- Eliminates manual approval updates
- Improves process consistency
- Provides real-time visitor status tracking

User Guide: -

Step 1: Access the Application:

Search:

Visitor Management System

Open:

Visitors

module from the application navigator.

Step 2: Create a New Visitor Record:

Click:

New

and complete the visitor registration form.

Required Information:

- Visitor Name
- Employee Name
- Phone Number
- Email
- Company Name

- Visit Date
- Purpose of Visit

Submit the form.

Step 3: Phone Number Validation:

The system validates the phone number automatically.

Validation Rule:

Phone Number must contain exactly 10 digits.

If invalid:

Phone Number must contain exactly 10 digits.

is displayed and submission is prevented.

Step 4: Automatic Visitor Approval:

After submission:

- Visitor record is created.
- Flow Designer executes automatically.
- Visitor Status changes from Requested to Approved.
- Approval email is generated automatically.

This confirms successful workflow execution.

Step 5: Approval Notification:

The visitor receives an automated email notification.

Email Includes:

- Visitor Name
- Visit Date
- Purpose of Visit
- Approval Confirmation

This ensures timely communication with visitors.

Step 6: Visitor Check-In:

Reception or Security personnel open the approved visitor record.

Click:

Check In

button.

System Actions:

- Status changes to Checked In.
- Check-In Time is recorded automatically.
- Success message is displayed.

Step 7: Visitor Status Tracking:

The system allows administrators to monitor visitor progress through the Status field.

Available Statuses:

- Requested
- Approved
- Checked In
- Completed

This provides complete visibility into visitor activities.

Administrator Guide: -

Visitor Record Management:

Administrators can:

- Create visitor records
- Edit visitor information
- Delete visitor records

- Track visitor status
- Monitor visitor activity

Flow Monitoring:

Administrators can access:

Flow Designer

to monitor workflow execution.

Verification Points:

- Trigger Execution
- Status Updates
- Email Notifications

Client Script Maintenance:

Administrators can manage validation rules through:

System Definition → Client Scripts

Validation Logic:

Phone Number Validation

- Exactly 10 digits required
- Prevents invalid submissions

UI Action Maintenance:

Administrators can manage:

Check In UI Action

through:

System Definition → UI Actions

Operational Workflow Documentation:

Process Complete

Documentation Outcome:

The Visitor Management System documentation provides complete guidance for end users, administrators, and developers. It covers visitor registration procedures, workflow automation, validation mechanisms, email notification processes, and visitor check-in operations. The

documentation ensures smooth system adoption, simplified maintenance, and effective operational management.
